Violent Incident Defense Strategies

THIS PROGRAM IS DESIGNED TO HELP INDIVIDUALS INCREASE THEIR DECISION-MAKING ABILITY AND CHANCES OF SURVIVAL DURING AN ACTIVE SHOOTER OR VIOLENT EVENT.

Presented by

Why Do I Need This?

Unfortunately, armed violence in schools, workplaces and in our homes occurs even in the smallest of towns across our nation. In a perfect world, we would be guaranteed safety and security in every moment of our life—but we know that's not realistic. That's why we're introducing this specialized training to provide you with strategies and tools to help you in the event you are confronted with an armed violent encounter.

The University of Northern Iowa Police are committed to the protection of the greatest gift—life. As university police we feel a moral obligation to provide this information that will hopefully help increase your chances of surviving an active-shooter event.

A.L.I.C.E. is being taught across the country in K-12 schools, college campuses, businesses and other organizations, to help people be mentally prepared for an active-shooter event. Society has trained us how to react to fires, floods, tornadoes and earthquakes; this program is no different.

A.L. ⓘ .C.E.

A – Alert

L – Lockdown

ⓘ – Inform

C – Counter

E – Evacuate

Instructors will teach strategies from the A.L.I.C.E. program designed to give you options, including escape routes, countering techniques and plans to increase your chances of survival, regardless of where you may be.

You'll learn what each letter in A.L.I.C.E. stands for and how to use these strategies to increase your chances of survival. Videos, lectures, demonstrations, discussion and participation will be used to help you learn strategies to improve your observation skills, decision-making ability and chances of survival, should you find yourself in a violent situation.

In the past several years, law enforcement has changed its approach to responding to active-shooter incidents. In past situations, many people had the opportunity to escape but did not—often becoming victims themselves. This training is designed to change how the public responds to active shooter incidents and increase chances of survival. It's not intended to scare you into thinking there is a violent situation lurking around every corner. However, it's designed to prepare you with knowledge and helpful tools should you find yourself in a violent situation.
